

Innovive Closed-Loop Recycling Service

Innovive offers an integrated recycling pickup service that eliminates dirty cage processing from your facility. Soiled cages are repackaged in their original bags while under the hood, and removed directly from your facility without having to dump or disturb bedding in any way.

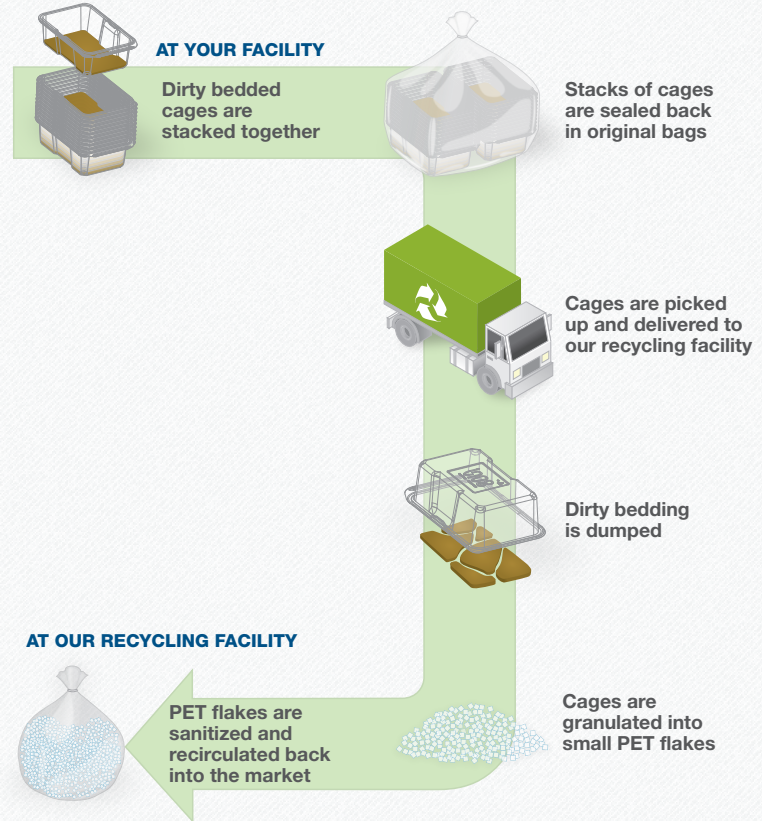

We then use a proprietary recycling line to separate the materials, recycle the plastic, and compost the bedding. This results not only in zero landfill impact, but in peace of mind as well.

Less Washing, More Science

Innovive's Recycling Process

Energy & Water Reduction

The Innovive Disposable Rodent IVC Caging System eliminates cage washing and sterilization from vivarium operations. Running a vivarium without a cage wash lowers a facility's energy use, water consumption, and detergent cost.

Diverting Plastic From Landfills

Our thermoformed plastic is made from up to 70% post-consumer plastic reclaimed in California. In 2013, our recycling service diverted 252 tons of plastic from landfills.

Better Design, Better Packaging

Our patented lightweight designs allow our products to be stacked efficiently. The minimal weight and packing density helps reduce transportation emissions.

Innovive Sustainability Commitment

Innovive understands the importance of reducing the environmental impact of our products and operations, which is why we strive to apply sound sustainable practices in everything we do – from the engineering and production down to the packaging and delivery of our products to your door.
